1 Executive Summary

This report documents the system impacts of Nine (9) projects in the PJM generator interconnection queue on the Midcontinent Independent System Operator (“MISO”) transmission system. The projects are listed in Table 1-1.

Table 1-1 List of PJM Group Generation Interconnection Projects

PJM Queue	PJM Point of Interconnection	Transmission	Size(MW)	Fuel Type	State
X1-087	Stillman Valley	ComEd	19	methane	IL
X3-023	S. Greenwich-Willard 69kV	AEP	60	wind	OH
Y2-050	Tidd-Canton Central	AEP	742	natural gas,CC	OH
Y2-053	Lemoyne 138kV	ATSI	35	Gas	OH
Y3-088	Kendall I	ComEd	20	natural gas,CC	IL
Y3-089	Kendall II	ComEd	20	natural gas,CC	IL
Y3-090	Kendall III	ComEd	20	natural gas,CC	IL
Y3-091	Kendall IV	ComEd	20	natural gas,CC	IL
Y3-103	Valley-Raccoon 138kV	DL	205	natural gas,CC	PA
		Total	1141		

Steady State AC analysis was performed to identify any reliability criteria violations caused by the study generators. The study did not identify any constraints in both the near term (2016) and the out year (2023) scenarios. The study projects have full injection capability conditional to the transmission and generation assumptions in this study.

2 Study Methodology & Assumptions

2.1 Study Criteria

All interconnection requirements are based on the applicable MISO Interconnection Planning Criteria and in accordance with the NERC Reliability Standards. Steady state violations of applicable planning criteria were attributed to the PJM group generation requests by the usage of MISO injection criteria, and applicable local planning criteria, especially, Northern Indiana Power Service Co. (NIPSCO) generation interconnection criteria. NIPSCO's Generation Interconnection criteria can be found under section 4.5 of the planning methodology document available at:

<https://www.misoenergy.org/Library/Repository/Study/TO%20Planning%20Criteria/NIPSCO%20TO%20Planning%20Criteria.pdf>

2.2 Contingency Criteria

A comprehensive list of contingencies was considered for steady-state AC contingency analysis:

- NERC Category A with system intact
- NERC Category B contingencies
 - Single element outages, at buses with a nominal voltage of 69 kV and above, in the following areas: NIPS (area 217), DEI (area 208), IPL (area 216), MEC (area 635), CWLD (area 333), AMMO (area 356), AMIL (area 357), CWLP (area 360), CE (area 222), AEP (area 205).
 - Multiple-element outages initiated by a fault with normal clearing such as multi-terminal lines, in AEP, CE, Ameren, MEC, CWLP, DEI, IPL, NIPS.
- NERC Category C contingencies
 - Selected NERC Category C events.

2.3 Monitored Elements

Table 2-1 Monitored Area outlines the list of areas monitored for this study. All facilities in the study region with a voltage of 69kV and above were monitored.

Table 2-1 Monitored Area

Area #	Area ID	Area Name
207	HE	Hoosier Energy
208	DEI	Duke Energy Indiana
210	SIGE	Southern Indiana Gas & Electric Company
216	IPL	Indianapolis Power & Light Company
217	NIPS	Northern Indiana Public Service Company
333	CWLD	Columbia, MO Water and Light
356	AMMO	Ameren Missouri
357	AMIL	Ameren Illinois

Area #	Area ID	Area Name
360	CWLP	City of Springfield (IL) Water Light & Power
361	SIPC	Southern Illinois Power Cooperative
295	WEC	Wisconsin Electric Power Company (ATC)
600	XEL	Xcel Energy North
608	MP	Minnesota Power & Light
613	SMPMPA	Southern Minnesota Municipal Power Association
615	GRE	Great River Energy
620	OTP	Otter Tail Power Company
627	ALTW	Alliant Energy West
633	MPW	Muscatine Power & Water
635	MEC	MidAmerican Energy
661	MDU	Montana-Dakota Utilities Co.
680	DPC	Dairyland Power Cooperative
694	ALTE	Alliant Energy East (ATC)
696	WPC	Wisconsin Public Service Corporation (ATC)
697	MGE	Madison Gas and Electric Company (ATC)
698	UPPC	Upper Peninsula Power Company (ATC)

2.4 Model Development

The following base cases were used for the study:

- StudyCase-DPP-Aug13_2016SPK_v32_MUST_131031.sav
- StudyCase-DPP-Aug13_2016SH_v32_MUST_131031.sav
- StudyCase-DPP-Aug13_2023SH_v32_MUST_131031.sav
- StudyCase-DPP-Aug13_2023SPK_v32_MUST_131101.sav

The study cases were built by adding and dispatching the appropriate queue projects to the base cases. The detail of each PJM interconnection request is listed in Table 1-1. The study projects were dispatched per MISO criteria to the entire PJM footprint, where generators were scaled in proportion to the available reserve.

2.5 Study Assumptions

This affected system impact study was conducted with all the PJM MAY 2014 participating generators operating together as a group. Analysis was not performed on individual generating units or subsets of the generating units unless specifically noted otherwise. Higher queued PJM projects were modeled as outlined in Appendix A of the report. The results obtained in this analysis may change if any of the data or assumptions which were made during the development of the study models is revised.

3 Steady State Analysis

3.1 Near Term (2016) Analysis

The analysis did not identify any criteria violations.

3.2 Out Year (2023) Analysis

The analysis did not identify any criteria violations.

4 Conclusion

The Affected system study did not identify any steady state thermal violations with the interconnection of the Nine PJM projects on the monitored MISO transmission system. Both Near-Term(2016) and Out-year (2023) analysis were performed as part of the study. These study projects have full injection capability conditional to the transmission and generation assumptions in this study.
